We need to keep it safe at home.

1. If you need to get something you cannot reach, ask someone to help you. Do not try to do it yourself.

2. Do not run and play ball inside the house. You might bump into something or break something. Go outside and play ball.
3. Turn off faucets when not in use or if the tub is already full. Never leave the faucet running.

Wipe spills dry immediately so no one slips on them.

4. Always clear the pathway where everyone walks in the house. Unplug electric cords and remove anything on the floor like sewing baskets or toys that somebody could trip on.
5. Eat slowly and chew your food well so you avoid choking on your food. Always have water ready to down your food. Call an adult to help immediately when someone is choking.

6. Do not jump on the bed as you could fall and hurt your head.

7. Put toys in their proper places. Do not leave toys on the stairs as someone could trip on them and fall down the stairs. And certainly, do not play on the banisters as you could get seriously hurt, too.

8. Do not play with knives. They are not toys and they could cut you.
9. Do not play with matches, fire, or candles. They could burn you and your house.

10. Do not play with any chemicals like paints, or gardening fertilizers as they could poison and kill you.
11. Unplug unused appliances like the computer, electric fans, radio, or heaters when not in use. Turn off the lights when not in use so they don’t overheat.

12. Lock the front door and back door when you are in the house and before you sleep at night. This will help protect you from robbers, thieves, and intruders.

Keep safe!!!
13. Dry your hands first before holding any electric appliance like computers, electric fans, toasters, microwave, etc. Do not hold electric appliances when your hands are wet so you will not be electrocuted.

Keeping Safe at Home
